

log-transformed, $n = 1$, $l = 7$, applied to unsmoothed peaks

log-transformed, $n = 1$, $l = 7$, applied to smoothed peaks

Intensity levels:

- very high
- high
- medium
- low

First column:

- mean threshold
- empirical 5% and 95% quantiles
- approximation of mean threshold under normality

Second column:

- intended shares of intensity levels
- empirical shares

Third to fifth columns:

- empirical sensitivity / specificity / PPV
- approximation under normality (where applicable)
